

Business and Information Technology Enterprise

Endpoint Protection, System Management, Fusion and Email Protection

BITE is an International Business and Information Technology Consulting Services Company

ENDPOINT PROTECTION & SYSTEM MANAGEMENT

Discover Endpoint Protection

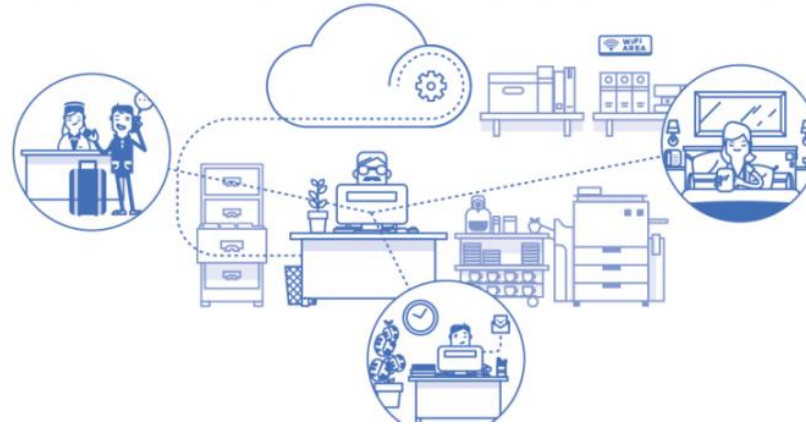

All operations are performed in the cloud. Therefore, the impact of the antivirus on system performance is virtually zero. Endpoint Protection protects all of your computers running Windows, Linux, Mac OS X, in addition to Android smartphones and tablets, against known and unknown (Zero-Day) threats. The solution we provide does not require additional infrastructure in your offices, minimizing the investment needed. Remotely monitor, control and adjust the security level of all network devices.

An enterprise antivirus solution

- Protection and disinfection
- Ease to use, easy to maintain
- A level of security for each situation and environment

More benefits of endpoint protection

With Endpoint Protection you can carefully monitor the security of your corporate network. Automatically generate easy to interpret reports and graphs or consult all of this data in real time through comprehensive dashboards. Apply different levels of protection according to the profile of the user that connects to your corporate network.

IT System Management

The best software for managing your company's IT infrastructure. Your company's maintenance and tech support from the cloud, wherever you are. Systems Management allows simple and affordable management, monitoring and support of all the devices in your company, whether they are in the office or on the move. All operations are performed in the cloud. You do not need any additional infrastructure to centrally manage all of your devices, smartphones and tablets. Systems Management allows you to optimize the functioning of your IT infrastructure thanks to its automated management and centralized control

Discover system management

- Centralized management and control
- Dramatically reduce calls to support
- Real-time device inventory
- Secure Device Management
- Remote Control and messaging
- Control your smartphones and tablets

FUSION & EMAIL PROTECTION

Easy to use and maintain

Email Protection is a service that provides multi-layer protection for your company's email. In addition, thanks to its advanced cloud-based scanning technologies it does not require any additional infrastructure to start operating. Email Protection allows centralized installation and management of the security of your company's email service from a Web console. It does not require installation, and platform updates are performed automatically and transparently.

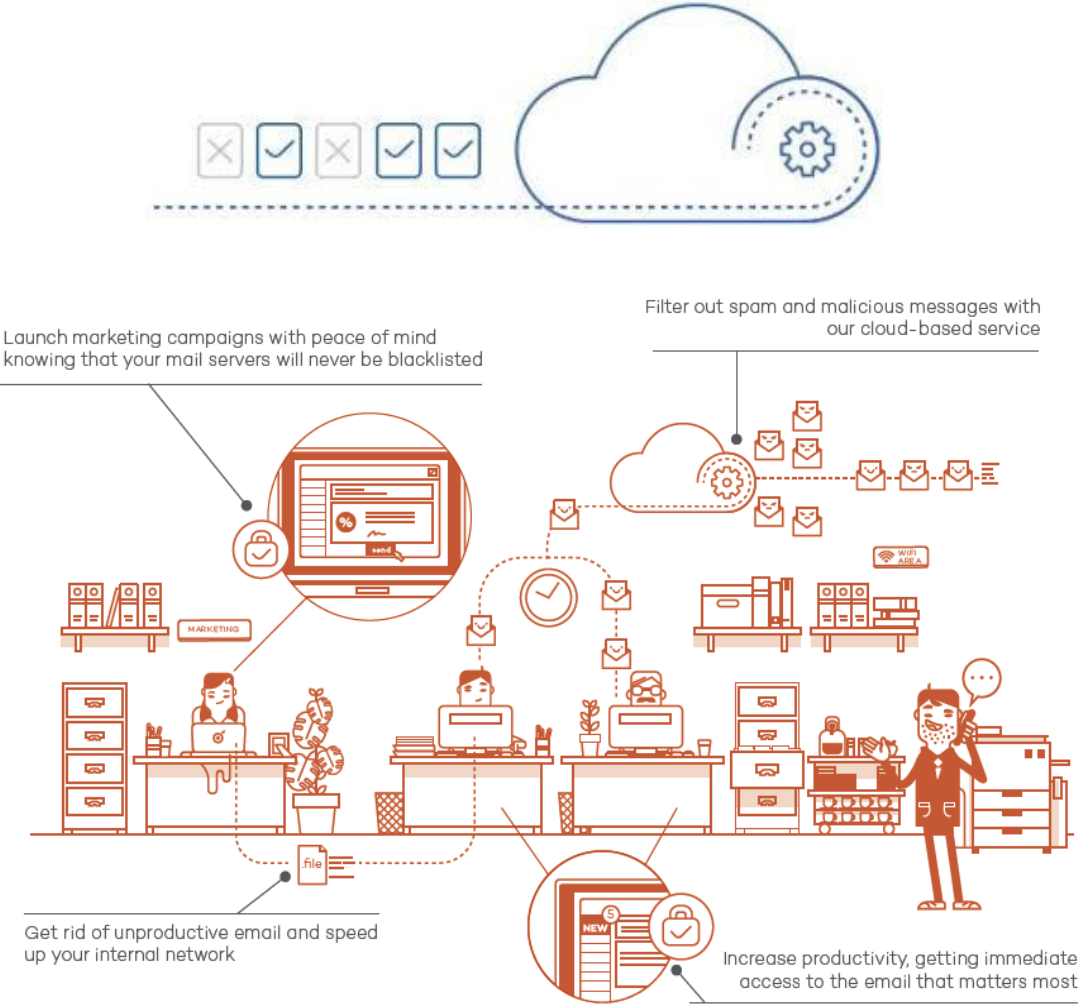

Email Protection is a cloud-based service that does not require investment in infrastructure or specialized staff to manage it. Email Protection allows secure and constant access to your company's email using the Webmail service. Get a dynamic view of system status and filtering activity.

Discover Fusion and Email protection

- Easy and Centralized management/control
- Maximum protection and Security
- Business continuity
- Proactive tech support
- Real-time device inventory

Fusion

The global solution for managing the security and IT infrastructure of your company Cloud-based Security, Management and Support. Fusion protects, manages and provides remote support to all the devices in your network, including smartphones and tablets. Fusion optimizes the performance of your IT infrastructure by automating management and centralizing control.

Solutions

IT Insight Drives Lower Cost and Risk

Adaptive Defense 360 is the first cyber-security service that combines next-generation protection (NG EPP) and detection and remediation technologies (EDR), with the ability to classify 100% of running processes.

Adaptive Defense is the only endpoint detection and response (EDR) solution that can accurately classify all the running applications in your organization.

BITE Consulting Services is partner with Panda Security for Europe and Caucasian markets.
